

Perry Liang

Kansas City, MO • (816) 379-9777 • p0343974@gmail.com • plhh6@umsystem.edu • [LinkedIn](#)

Electrical and Computer Engineering student at UMKC with a 4.0 GPA and experience in data analysis, Communication System, and AI-focused projects. Seeking internship opportunities in software ,hardware, data, or machine learning and Robotics where I can contribute strong analytical skills, coding ability, and hands-on project experience.

EDUCATION

University of Missouri–Kansas City | *B.S. in Electrical and Computer Engineering* Expected May 2028

GPA: 4.0/4.0

EXPERIENCE

Research Assistant | *dSAIC (Data Science and Analytics Innovation Center)* Jan 2026 – Present

- Conduct data analysis and predictive modeling by integrating environmental, weather, and policy factors to support research and innovation initiatives.
- Work with technical teams on organizing datasets and interpreting results for ongoing projects.

Research Assistant | *MIGHTY Lab, supervised by Dr. Md Ashikuzzaman* Jan 2026 – Present

- Assist with data processing for research in medical pictures.
- Contribute to ongoing work on Multidimensional Strain Elastography Framework.

Student Ambassador | *UMKC School of Science and Engineering* Jan 2026 – Present

- Represent the School of Science and Engineering to prospective students and families.
- Communicate academic programs, campus resources, and student opportunities in a professional setting.

PROJECTS

ChladniVision | *AI-Powered Pattern Recognition*

- Built and explored an AI-based pattern recognition project for analyzing Chladni-style visual patterns.
- <https://github.com/Perry-BIS/ChladniVision-New-Version/tree/main>

MeetHalfWay | *Location-Based Social Matching Platfor*

- Built a location-based platform that computes optimal meeting points for multiple users using distance optimization algorithms.
- Designed and implemented core logic for geolocation processing and midpoint calculation.
- Improved user convenience by minimizing total travel distance across participants.
- Project repository: github.com/Perry-BIS/MeetHalfWay

Smart Alcohol Detection System | Embedded Sensor Fusion Prototype

- Built a real-time embedded sensing system for alcohol vapor and air-quality detection using Arduino, Raspberry Pi, and a multi-sensor array

TECHNICAL SKILLS

Programming: Python, C++

ML: TensorFlow, SVM, DBSCAN , K-Means , Neural Network , Random Forest, DQN , LLM

HONORS

- UMKC Honors Program
- Hack-a-Roo AI + Data Science Group — 1st Prize
- Research-A-Thon SF NRT AI & Engineering Challenges Track 1st place
- Built an embedded alcohol detection prototype using **Arduino** and **Raspberry Pi** for real-time environmental sensing and alert generation.
- Integrated alcohol sensors with microcontroller-based data acquisition and live monitoring pipeline.
- Supported sensor calibration, hardware/software interfacing, and prototype testing in real-world conditions.
- Collaborated on system design for low-cost embedded safety monitoring and engineering deployment.
- Research-A-Thon SF NRT AI & Engineering Challenges Track 2nd place
- Garmin Scholarship Fund Scholarship, University of Missouri–Kansas City, 2025
