

Perry Liang

Address: Kansas City, MO | **Phone:** (816) 379-9777 | **Email:** p0343974@gmail.com | **GitHub:** github.com/Perry-BIS
LinkedIn: www.linkedin.com/in/perry-liang-615a7538b | **Portfolio:** perry-bis.github.io/

Summary:

Applied AI and computer vision researcher with hands-on experience building end-to-end systems for medical imaging, real-time classification, and geospatial recommendation. Proficient in Python, TensorFlow, OpenCV, FastAPI, LLM workflows, and API-integrated applications. Seeking AI engineering, agent systems, computer vision, or applied research internships.

Education:

Bachelor Science - Electrical & Computer Engineering

University of Missouri-Kansas City | **GPA:** 4.0/4.0

May 2028

Kansas City MO

- **Peer Academic Leader** | UMKC Peer Academic Leadership Program April 2026 - Present
 - **Student Ambassador** | UMKC School of Science and Engineering January 2026 - Present
 - **Garmin Scholarship** Fund Recipient & **UMKC Honors Program** January 2026 - Present
 - **Research-A-Thon SF NRT AI & Engineering Challenges Track** - 1st Place and 2nd Place March 2026
 - **Hack-a-Roo AI + Data Science Group** - 1st Prize October 2025
-

Skills:

Programming: Python, C++, TypeScript, JavaScript, MATLAB

AI / Computer Vision: TensorFlow, OpenCV, Scikit-learn, Image Processing, Feature Extraction, Medical Imaging, Signal Processing, LLM workflows

AI Systems / Backend: FastAPI, REST APIs, WebSockets, Streamlit, React, Mapbox, OpenRouteService, OpenStreetMap/Overpass, Git

Data: Data visualization, Data Analysis, SQL

Engineering: Ultrasound RF/B-mode Data, Displacement/strain Estimation, Arduino, Raspberry Pi, Sensor Fusion

Relevant Work Experience:

Research Assistant, Medical AI

MIGHTY Lab, University of Missouri - Kansas City

January 2026 - Present

Kansas City MO

- Develop Python/MATLAB workflows that transform Clarius RF/B-mode ultrasound data into dense displacement, axial strain, and shear maps for tissue-mimicking phantoms.
- Evaluate image-processing and visualization parameters across controlled compression conditions using contrast-to-noise ratio, boundary sharpness, repeatability, and smoothness;
- Communicate findings to faculty and graduate researchers.
- Document reproducible experimental procedures and quantitative results to guide next-stage medical imaging studies.

Research Assistant, Data Science

dSAIC, University of Missouri - Kansas City

January 2026 – Present

Kansas City MO

- Analyze and organize applied research data integrating environmental, weather, and policy signals
 - Prepare interpretable inputs and results for data-science collaborators.
-

Projects:

MeetHalfWay | Geospatial Recommendation & AI Application Platform

February 2026 – May 2026

- Designed a multi-user recommendation workflow that combines routing APIs, travel-time constraints, and interactive maps to identify equitable group meeting locations.
- Integrated Mapbox, OpenRouteService, OpenStreetMap/Overpass, and Streamlit to retrieve points of interest, calculate participant travel effort, and present transparent recommendations.

ChladniVision | Real-Time Computer Vision & Pattern Classification System

May 2025 – October 2025

- Built a full-stack real-time computer vision system for Chladni pattern detection and classification using Python, OpenCV, TensorFlow, FastAPI, React, TypeScript, and Tailwind CSS.
- Implemented an end-to-end image-analysis pipeline for preprocessing, feature extraction, live prediction, and WebSocket-based result streaming.
